Global Sourcing & SCM

Hub for global sourcing and supply chain services

PackSys Global Engineering Services offers high quality engineering design, technical documentation, digital, global sourcing and supply chain services. We provide services to machine manufacturers across the globe for over a decade. Our team of experts use state-of-the-art, best-in-class working tools and data formats to deliver unique solutions.

As manufacturers are growing global, there is an increase in the trend to source from India. We have identified this need and have set up a well-established supplier ecosystem with expertise in various manufacturing processes. We are a global sourcing hub of tailor made parts and high precision components. We follow a well-defined strategy and a meticulous plan to identify the right set of vendors and develop them to become your manufacturing partners.

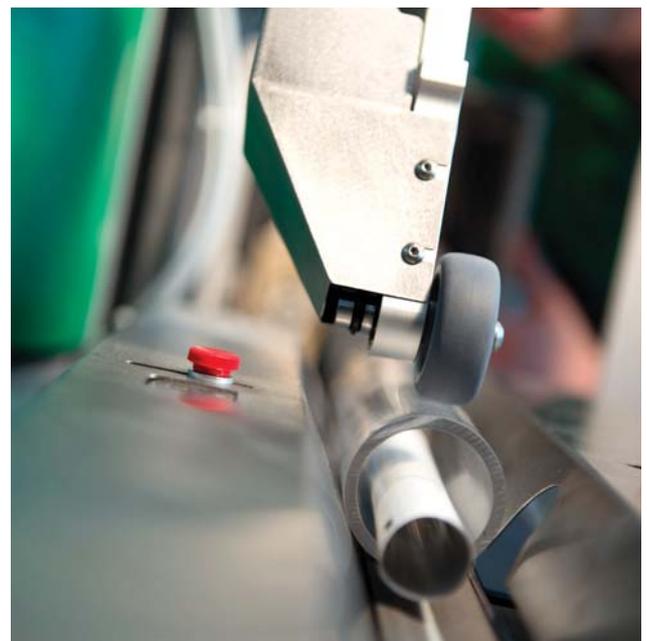

We source different types of precision components like critical spares, consumables and capital goods. Our sourcing strategy is tailor-made to the different stages of product development lifecycle. Be it new product development, prototyping, production, after-sales or end of life sourcing needs, our team of experts and qualified vendors are always willing to go that extra mile and deliver the right part at the right price and right time.

It is important to ensure the quality of parts delivered by the vendors throughout the project duration. We follow standard manufacturing process and assist the vendors to deliver the parts with required quality. We also visit the supplier's facilities regularly and perform quality checks on the material delivered.

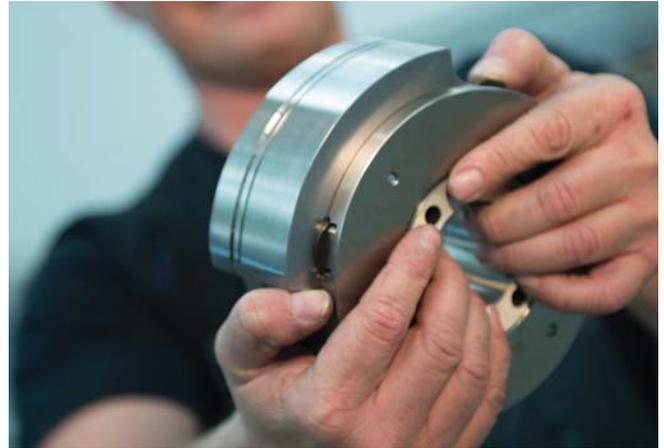

Sourcing is incomplete without a robust supply chain management. We have devised effective warehousing and logistics processes which help us to provide our customer with cost effective and timely deliveries.

Your Benefits

- Highly skilled engineers with 15+years of domain experience
- Best practices across domains and products
- Well established supplier
- High precision measuring instruments and machines
- Experience with varied manufacturing processes
- Experience in supplying precision components to European machine manufacturers
- Stringent quality assurance processes

Vendor development:

We take the complete ownership of vendor development. Our process starts with understanding of our client's sourcing objective, strategy, product development stage and sourcing material.

We then identify the right set of vendors and carry out the RFQ process followed by negotiation and finalization. We also undertake periodic quality assurance and audits to ensure the quality standards of the manufactured components.

Our vendor ecosystem is equipped to manufacture parts from different raw material types such as carbon steel, chromium steel, brass, bronze, PVC, POM, teflon and so on.

Some of the components that we can supply include bearing housings, flanges, threaded pins, tailor-made precision components, sheet metal and fabrication parts, sub assembly and so on.

Our activities include:

- Vendor identification
- RFQ process
- Costing and negotiations
- Quality assurance
- Inspection
- Audits
- Training

Manufacturing:

We undertake a host of manufacturing support processes such as machining, casting, forging and sheet metal operations. Every process requires domain know-how and meticulous planning for optimum production quality and timely delivery. We plan the right type of manufacturing processes depending on the desired results. Our vendors are equipped with well-established manufacturing infrastructure where we can undertake manufacturing of all types of precision components.

We conduct frequent audit at our vendors facility to ensure compliance to our manufacturing standards including safety norms. Our core competence in manufacturing includes:

- Manufacturing and supply of high precision components
- Tooling/fixture design and manufacturing
- Specialization in machining, casting, forging and sheet metal
- Specialized surface treatment or coatings such as electroless nickel plating, anodizing, hard anodizing etc.
- Hardening processes such as induction hardening, case hardening, nitriding, vacuum hardening etc.

Supply chain management:

For timely and cost effective delivery of raw materials and end products to multiple stakeholders, we have developed robust logistics and warehousing solutions. This also includes effective packaging and delivery solutions to meet our customer's specialized requirements.

We have tie-ups with reputed international freight forwarders and third party logistics partners for hassle free delivery of components to our customers. We deliver parts to our customer's on-time at their door-steps; this has helped us to align with the Just-in-time procurement strategy of our customers.

Our activities include:

- Material management
- Packaging
- Logistics
- Warehousing

We also offer: Engineering design, technical documentation and digital services. Find out more on our website.
